This book presents innovations in teaching and learning science, novel approaches to science curriculum, cultural and contextual factors in promoting science education and improving the standard and achievement of students in East Asian countries. The authors in this book discuss education reform and science curriculum changes and promotion of science and STEM education, parental roles and involvement in children's education, teacher preparation and professional development and research in science education in the context of international benchmarking tests to measure the knowledge of mathematics and science such as the Trends in Mathematics and Science Study (TIMSS) and achievement in science, mathematics and reading like Programme for International Student Assessment (PISA). Among the high achieving countries, the performance of the students in East Asian countries such as Singapore, Taiwan, Korea, Japan, Hong Kong and China (Shanghai) are notable. This book investigates the reasons why students from East Asian countries consistently claim the top places in each and every cycle of those study. It brings together prominent science educators and researchers from East Asia to share their experience and findings, reflection and vision on emerging trends, pedagogical innovations and research-informed practices in science education in the region. It provides insights into effective educational strategies and development of science education to international readers.

This is a biology textbook written in line with the 2013 GCE Ordinary level science (biology) syllabus from the Ministry of Education, Singapore.

Climate change is a controversial topic; some people assert that climate change is not occurring, and others believe that reports are inaccurate, that whilst climate change is happening, it may not be caused by human activity. There are also climate alarmists who use IPCC reports to support their claims that erratic weather patterns are a result of climate change caused by human activity. Regardless of these different viewpoints, one fact can be agreed upon; climate change is a complex subject and there is a need to educate future generations, enabling them to deal with the plethora of information and views that they will experience in their lives. This book explores what education for climate change entails, discussing the concept of Climate Change Education (CCE) itself, how it can be taught in schools and how public education can be carried out. It instructs what specific subject matter to teach for CCE, and how to evaluate the student learning on the subject. Chapters include: CCE in the Formal Curriculum Teacher readiness for CCE Assessment for and of CCE Lessons from CCE for Public Education Climate Change Education is an extremely useful resource for anyone involved in educating students on

climate change and also for those interested in climate change itself.

- a beginner's guide to effective grasping of key concepts • explanations are quick and easy to understand • holistic question answering techniques • exact definitions • complete edition eBook only
- in-depth coverage of syllabus • comprehensive examples and solutions for quick revision • helps students to familiarise with various exam question-types • complete edition and concise edition eBooks available

Now in its 43rd edition, British Qualifications is the definitive one-volume guide to every qualification on offer in the United Kingdom. With full details of all institutions and organizations involved in the provision of further and higher education, this publication is an essential reference source for careers advisors, students and employers. It also includes a comprehensive and up-to-date description of the structure of further and higher education in the UK. The book includes information on awards provided by over 350 professional institutions and accrediting bodies, details of academic universities and colleges and a full description of the current framework of academic and vocational educational. It is compiled and checked annually to ensure accuracy of information.

When Boniface Nwugwo left his hometown in Eastern Nigeria in 1980 to study in America, he had only \$4600 to his name for his tuition, his faith in God and an unquenchable thirst to succeed in America. In this revealing, inspiring and compelling memoir, Boniface with uncompromising candor, tells his story of courage, insurmountable struggles, and triumphs that he and many West African immigrants faced before and after coming to America demonstrating that you can reach your dreams if you persevere. From modest beginnings as the son of a teacher in his native Imo State of Nigeria, Boniface Nwugwo overcame poverty to distinguish himself as a brilliant academic and achieve a respectable career in the information technology industry. Through his story and the sample stories of other West African immigrants, America's promise as land of immigrants with infinite possibilities are rekindled in this self-revealing and self-fulfilling book.

Lots of Laughter: Praise for the Good Old Days is a reflection of the Antigua culture and customs that enveloped Valerie Knowles Combie as she grew up in the small village of Cedar Grove. From a young age Valerie and her friends learned to treat all adults with the same respect they showed their own parents, because it wasn't just your parents who raised you, it was the village. The culture of loving your neighbor as if they were your own family, working hard, and being involved in your church is what life was all about for the people Valerie knew growing up as a child, and it is what defines her as an individual today. Encompassing everything from the process of building houses to old family recipes, Valerie delves into her memory bank to give the reader a vivid picture of the day-to-day life and culture of the Antigua she once knew. Lots of Laughter proves to be insightful and heartwarming for anyone who has ever had a longing for the good old days.
