The sport compact performance market is hot and getting hotter - and while the Honda Civic and Acura Integra have long been the dominant players in the market, a newcomer is emerging as a popular car for performance modifications - The Ford Focus. Well-built, inexpensive, good looking, and easy to modify, the Focus is quickly catching the Hondas in terms of market popularity. This book shows Focus owners exactly what it takes to improve their car's performance, from simple modifications like installing a new air intake to radical mods like installing a turbocharger. The author also shows what those modifications can do, with before-and-after dyno tests for each modification. There's also extensive info on suspension and brake modifications for better handling and braking. It's a one-stop shop for those who want a sharper, faster Focus. Dimensions: 8-3/8 x 10-7/8 inches # of color photographs: None inside- color cover only # of black and white photographs: 300

The Routledge International Handbook of Forensic Psychology in Secure Settings is the first volume to identify, discuss and analyse the most important psychological issues within prisons and secure hospitals. Including contributions from leading researchers and practitioners from the UK, US, Australia and Canada, the book covers not only the key groups that forensic psychologists work with, but also the treatment options available to them, workplace issues unique to secure settings, and some of the wider topics that impact upon offender populations. The book is divided into four sections: population and issues; treatment; staff and workplace issues; contemporary issues for forensic application. With chapters offering both theoretical rigour and

practical application, this is a unique resource that will be essential reading for any student, researcher or practitioner of forensic psychology or criminology. It will also be relevant for those interested in social policy and social care.

Furnishing the latest interdisciplinary information on the most important and frequently the only investigational system available for discovery programs that address the effects of small molecules on newly discovered enzyme and receptor targets emanating from molecular biology, this timely resource facilitates the transition from classical to high throughput screening (HTS) systems and provides a solid foundation for the implementation and development of HTS in bio-based industries and associated academic environments.

An ensemble of analytic tools is used to identify capacity expansion alternatives for the Delaware River dredged-material disposal system. Characteristics of the river and riparian area are stored and analyzed with a geographic information system. Site attractiveness maps produced with these data yield an array of potential expansion sites. The least-costly schedule for acquisition of these sites is identified with branch-and-bound enumeration. For the enumeration, the operation cost of alternative expansion plans is evaluated with a network-flow programming model of the disposal system. (Author).
