The Oxford Handbook of Film Music Studies gathers two dozen original essays that chart the history and current state of interdisciplinary scholarship on music in audiovisual media, focusing on four areas: history, genre and medium, analysis and criticism, and interpretation.

This is a guide to the study of film, covering the significant theories, debates and approaches to the subject. Contributors provide an overview of the main disciplinary approaches, explaining the concepts and methods involved in film analysis.

In recent years, environmental and human rights advocates have suggested that we have entered the first new geological epoch since the end of the ice age: the Anthropocene. In this new epoch, humans have come to reshape unwittingly both the climate and natural world; humankind has caused mass extinctions of plant and animal species, polluted the oceans, and irreversibly altered the atmosphere. Ironically, our efforts to make the planet more hospitable to ourselves seem to be driving us toward our inevitable extinction. A force of nature, humanity is now decentered as the agent of history. As Jennifer Fay argues, this new situation is to geological science what cinema has always been to human culture. Film, like the Anthropocene, is a product of the industrial revolution, but arises out of a desire to preserve life and master time and space. It also calls for the creation of artificial worlds, unnatural weather, and deadly environments for entertainment, scientific study, and devising military strategy. Filmmaking stages, quite literally, the process by which worlds and weather come into being and meaning, and it mimics the forces that are driving this new planetary inhospitality. Cinema, in other words, provides an image of "nature" in the age of its mechanical reproducibility. Fay argues that cinema exemplifies the philosophical, political, and perhaps even logistical processes by which we can adapt to these forces and also imagine a world without humans in it. Whereas standard ecological criticism attends to the environmental crisis as an unraveling of our natural state, this book looks to film (from Buster Keaton, to Jia Zhangke, to films of atomic testing and early polar exploration) to consider how it reflects upon the creation and destruction of human environments. What are the implications of ecological inhospitality? What role might cinema and media theory play in challenging our presumed right to occupy and populate the world? As an art form, film enjoys a unique relationship to the material, elemental world it captures and produces. Through it, we may appreciate the ambitions to design an unhomey planet that may no longer accommodate us.

Offers a wealth of insight into the paradoxical nature of film, considering its role and impact on society in the 20th century as well as its future in the digital age. Original.

The Oxford Handbook of Hellenic Studies is a unique collection of some seventy articles which together explore the ways in which ancient Greece has been, is, and might be studied. It is intended to inform its readers, but also, importantly, to inspire them, and to enable them to pursue their own research by introducing the primary resources and exploring the latest agenda for their study. The emphasis is on the breadth and potential of Hellenic Studies as a flourishing and exciting intellectual arena, and also upon its relevance to the way we think about ourselves today.
