E. Bruce Goldstein's SENSATION AND PERCEPTION, the best-seller which has helped over 150,000 students understand the ties between how we sense the world and how the body interprets these senses, is now in a brilliant full-color Seventh Edition. A key strength of this text has always been the ability to show the student what they are learning through examples and visuals. Now, the book takes this visual learning one step further by using color throughout as a learning tool. As the sole author of the text, Goldstein's singular voice combines with his extensive classroom experience and most innovative research to create a visual text unparalleled in the field. The text walks the student through an intriguing journey of the senses with a mixture of clarity and thoroughness. The accompanying, "Virtual Lab" media exercises (available both on CD-ROM, within the Perception PsychologyNowTM student tutorial platform, and in the online WebTutorTM Advantage product) offer a wide array of animations and examples designed to stimulate understanding of difficult concepts. Every chapter has been updated for currency and readability, and a new chapter six on Visual Attention rounds off this timely revision.

This text's success has come in large part from its up-to-date coverage of important research and theories and offers the latest and most comprehensive overview of cognition on the market today. Recent developments in perception, imagery, problem solving, and creativity are highlighted along with advances in such areas as memory and language and expanded theoretical approaches.

The streamlined Virtual Lab Manual includes worksheets for the Virtual Lab experiments to allow you to take a closer look at the labs and engage in analysis of the results. You can tear out the perforated pages and submit them as homework assignments. The worksheets are also available in the Virtual Lab CD-ROM, CengageNOW, and WebTutor.

LEARNING AND BEHAVIOR, Seventh Edition, is stimulating and filled with high-interest queries and examples. Based on the theme that learning is a biological mechanism that aids survival, this book embraces a scientific approach to behavior but is written in clear, engaging, and easy-to-understand language. Available with InfoTrac Student Collections http://goengage.com/infotrac. [The book] is designed both to explain the major personality theories and to stimulate critical thinking about them. [The author] has pursued four main objectives. To present a clear and concise picture of the major features of each important personality theory ... To focus on significant ideas and themes that structure the content of the different personality theories ... To provide criteria to guide the evaluation of each theory ... To present activities, informed by the tenets of each theory, that will provide growth in critical thinking skills. -Pref.

Now updated and revised with more than 600 new research citations, new chapters, and effective new pedagogy, Sensation and Perception, Sixth Edition provides broad, theoretically balanced coverage, along with late-breaking discoveries and new thinking on how we see, hear, taste, smell, touch, and make sense of our world. Featuring do-it-yourself demonstrations of actual perceptual phenomena, Coren, Ward, and Enns's interactive approach to sensation and perception enables you to use your own senses to understand this fascinating and dynamic field. Book jacket.

Personality Psychology: Foundations and Findings is an evidence-based text with integrated cultural references and excellent coverage of the key building blocks of the subject matter—namely, the “ foundations ” (traits, genetics, self and identity, neuroscience, intrapsychic aspects, regulations and motivation, and cognition as it applies to the human personality) and the “ findings ” (the cutting edge research in each of these areas in which personality psychologists are actively engaged every day).

An accessible and engaging account of the mind and its connection to the brain. The mind encompasses everything we experience, and these experiences are created by the brain--often without our awareness. Experience is private; we can't know the minds of others. But we also don't know what is happening in our own minds. In this book, E. Bruce Goldstein offers an accessible and engaging account of the mind and its connection to the brain. He takes as his starting point two central questions--what is the mind? and what is consciousness?--and leads readers through topics that range from conceptions of the mind in popular culture to the wiring system of the brain. Throughout, he draws on the latest research, explaining its significance and relevance.
