Every year thousands of people in Oakland California arrive at the ED in the acute stages of opioid withdrawal.¹ Opioid withdrawal, an agonizing process that involves vomiting, diarrhea, shivering and pain, has historically been treated with an anti-nausea table, a discharge order, and sometimes a list of phone numbers for local drug rehabs.

Examining how EDs across America are addressing the opioid ...

In emergency medical services (EMSs), accurately predicting the severity of a patient's medical condition is important for the early identification of those who are vulnerable and at high-risk. In this study, we developed and validated an artificial intelligence (AI) algorithm based on deep learning to predict the need for critical care during EMS.
